8/16/2018	300			User-defined quantity			

1.6. Miscellaneous Changes

11i Firewall support has been updated for SubInventory mode (1.5.86 30/8/20)

2.1 New More4apps Brand Applied

Version: 1.5.76

Date: 01/05/2020

This will have no functional impact on users and is purely a cosmetic update.

Existing templates with previous styles will work with this version, please note however the colours may change in these sheets when invoking Wizard functionality.

2.2 Miscellaneous Changes

Version: 1.5.76

Date: 01/05/2020

There have been a few other changes worth noting:

- Fixed the issues of updating UOM when GTIN profile setup/doesn't setup
- Fixed the DFF form reference issues

3 Release 1.5.52 – 25/05/2018

The following includes details of the incremental fixes, functionality changes and or additions to Item Extension Wizard as a part of its development and release process.

Version	Date	Description
1.5.20	28/08/17	Added an additional Extension package for the Cross Reference Mode of the Wizard. This allows custom validation to be added against the Wizard. Running this package is controlled by the profile option named "More4Apps: IEW Enable Extension Pkg". This profile option needs to be enabled before this extension package will be called by the Wizard. Version 1.0.2 of the Extension package is required if the functionality is to be used.
1.5.25	07/08/2017	Added DFF support to the Related Item Mode. Templates without DFF columns will still work, however if DFFs are required please use this version and create a new template.
1.5.47	02/05/2018	Added the new column 'New Cross Ref Value' to the Cross Reference Mode in the Wizard. This allows the user to now update the cross reference values without having to create a new cross reference. A new template is required and at a minimum version 1.5.47 to be able to achieve this functionality.
